

## DENTURE CASE WITH DENTURE BRUSH #405

Thank you for purchasing Archtek's Denture Case with a Denture Cleaning Brush. Only Archtek offers an attractive and convenient solution for cleaning and storing dentures and other dental appliances.

### DIRECTIONS FOR USE:

- With the lid off and the white basket tightly fitted into the bottom of the case, place dentures in the bottom of the basket and fill with cool tap water to the level of the ledge holding the denture brush.
- Drop one denture cleansing tablet into the water and close the lid with the brush inside. The effervescent tablet action also helps to keep the denture brush clean.
- Clean overnight or as recommended by tablet manufacturer.
- After cleaning, remove the lid and then the white basket, allowing the water to fully drain from the basket. Pour the water from the bottom of the case down the drain.
- Brush dentures under tap water. Dentures can also be brushed before cleaning with the effervescent tablet.

When finished, rinse with fresh water all 3 parts of the denture case as well as the brush removing all excess water. Air dry.
